

## Community Microgrid

Speaker 1 ([00:00](#)):

When severe weather or other event takes the electric grid down, is your community ready? If your answer is no, a community microgrid might be the solution. It keeps the power on when the larger grid is down so that critical facilities like police stations and hospitals can be safely energized. Creating a microgrid requires collaboration between your community, a technical engineering firm, and PG&E. It can also be costly, which is where the Microgrid Incentive program comes in. It's a competitive grant program that awards up to \$15 million for the design and development of your community's microgrid. The program serves rural, tribal, and disadvantaged communities. Pg&e will support you every step of the way so your community has an additional layer of energy resilience. Learn more and see deadlines for application at [PGE.COM/slash/mip](http://PGE.COM/slash/mip).
