- 1. This capacity value is derived solely for the purposes of implementing the as-delivered capacity price under the Settlement Agreement approved in CPUC Decision (D.) 06-07-032.
- 2. A weighted average of the capacity value is used for meters without time-of-delivery metering.
- 3. Capacity allocation factors (CAF) allocate the capacity value for seasons and time-of-delivery periods. These factors are derived by dividing the allocation percentages effective January 1, 2010, and approved in D. 97-03-017 by the number of hours in each time-of-delivery period. These percentages and hours are summarized, as follows:

| | CAFs | s (%) | 2010 Delivery Hours | | |
|----------------|----------|----------|---------------------|----------|--|
| | Period A | Period B | Period A | Period B | |
| Peak | 76.19% | N/A | 762 | 0 | |
| Partial-Peak | 2.38% | 21.25% | 889 | 1,651 | |
| Off-Peak | 0.02% | 0.15% | 2,029 | 1,969 | |
| Super-Off-Peak | N/A | N/A | 736 | 724 | |
| Season total | 78.59% | 21.41% | 4,416 | 4,344 | |

Example of year/hr CAF for "Period A - Peak:" 76.19% divided by 762 hours = 0.0009999

- 4. Capacity prices are adjusted for the effect of deliveries on PG&E's transmission and distribution losses based upon the seller's interconnection voltage level. The loss adjustment factors for non-remote facilities (as defined by the CPUC) are shown here.
- 5. The as-delivered capacity price is the product of three factors: capacity value, allocation factor, and capacity loss adjustment factor.
