

How PG&E's Regional Renewable Choice Program Works

The Regional Renewable Choice program allows customers to subscribe directly to renewable energy from specific newly developed generation projects sized from 0.5 to 20 MW.

The transaction structure of the Regional Renewable Choice program has three main components:

Customer-Developer Agreement

Customers have the opportunity to contract directly with a developer on a specific renewables project and subscribe to a portion of the project's output corresponding to all or a portion of the customer's energy needs. The developer and eligible customers are free to make any financial arrangement that they wish and sign a Customer-Development Agreement (CDA).

Customer Energy Statement Credit

The customer will receive a credit on their PG&E energy statement based on the calendar month output of their subscription to the project. View the [E-ECR rate schedule](#). The credit will not reflect the charges between the developer and customer.

Power Purchase Agreement

Developers sign a Renewable Auction Mechanism (RAM) Power Purchase Agreement and Enhanced Community Renewables rider (pending California Public Utilities Commission approval) with PG&E. PG&E pays the developer for the unsubscribed energy only (energy associated with project capacity not subscribed to by customers).
