- 1. This capacity value is derived solely for the purposes of implementing the as-delivered capacity price under the Settlement Agreement approved in CPUC Decision (D.) 06-07-032.
- 2. A weighted average of the capacity value is used for meters without time-of-delivery metering.
- 3. Capacity allocation factors (CAF) allocate the capacity value for seasons and time-of-delivery periods. These factors are derived by dividing the allocation percentages effective January 1, 2009, and approved in D. 97-03-017 by the number of hours in each time-of-delivery period. These percentages and hours are summarized, as follows:

	CAFs	s (%)	2009 Delivery Hours		
	Period A	Period B	Period A	Period B	
Peak	76.19%	N/A	774	0	
Partial-Peak	2.38%	21.25%	903	1625	
Off-Peak	0.02%	0.15%	2003	1995	
Super-Off-Peak	N/A	N/A	736	724	
Season total	78.59%	21.41%	4416	4344	

Example of year/hr CAF for "Period A - Peak:" 76.19% divided by 774 hours = 0.0009844

- 4. Capacity prices are adjusted for the effect of deliveries on PG&E's transmission and distribution losses based upon the seller's interconnection voltage level. The loss adjustment factors for non-remote facilities (as defined by the CPUC) are shown here.
- 5. The as-delivered capacity price is the product of three factors: capacity value, allocation factor, and capacity loss adjustment factor.
