PG&E Witness:		Requester:	Alan Wehrman

SUBJECT: ASSET INSPECTIONS

The following questions related to PG&E's 2021 Wildfire Mitigation Plan (WMP) Update.

QUESTION 09

P. 585 of PG&E's 2021 WMP states, "One key component of the 2021 Wildfire Distribution Risk Model are the data inputs from enhanced inspection results from 2019 and/or 2020. Assets that continually show signs of concern can be inspected more frequently."

- a. Please list which enhanced inspection results are used as data inputs into the 2021 Wildfire Distribution Risk Model.
- b. Sections 4.5.1(b) through 4.5.1(e), on pages 130-136, discuss the Wildfire Distribution Risk Model. These sections do not appear to mention data inputs from enhanced inspection results being a key component of the model. Please explain this apparent discrepancy with the statement quoted above.

ANSWER 09

The statement on page 585 of the WMP was an inadvertent error which PG&E will correct in an errata. While PG&E's current plan is to include inspection results as an input to the 2022 Wildfire Distribution Risk Model, they were not used in developing the 2021 Wildfire Distribution Risk Model.
