Q1. Purpose of utility survey:

This survey, in addition to other inputs, will be used to inform the utility's maturity level to establish a level for the current year (2021), as well as establish a target maturity for 2023.

The assessment of maturity will also leverage each utility's WMP submission, other supporting documents and disclosures, and select audits of relevant inputs where deemed necessary.

Instructions for answering each of the survey questions:

Utilities shall answer survey questions by:

- 1. Indicating the most appropriate response option to each question based on the <u>presently employed</u> <u>practices and capabilities</u> of the utility.
- Indicating the most appropriate response to each question for the utility's expected capabilities in 3 years (Q1, 2023) based on expected growth in maturity over the 3 year period of the Wildfire Mitigation Plan (WMP) to inform the utility's 3-year target maturity.

Only one response option should be selected unless the question is specified as select all that apply.

Importantly, utilities shall only indicate that they meet a given response option if they meet <u>all</u> of the characteristics described within that response option, across <u>all instances</u> where that question is valid.

For example, if a utility meets all criteria for answer ii of a given question and all but one criterion for answer iii, that utility must select answer ii. Similarly, if a utility meets all criteria for answer ii of a given question over 60% of its territory but meets all criteria for answer i over 100% of its territory, the utility must select answer i.

Instructions for use of the electronic survey:

Please fill out the electronic survey in its entirety.

The unique link provided to you can be used on multiple devices. Please only use on a single device at a time. To avoid creation of any conflict copies, please allow 15 minutes to pass before switching between devices. For example, if passing the survey off to a colleague on a different machine please have the colleague wait for 15 minutes after you stop working to begin.

If you are completing the survey in multiple sittings, your progress will be saved. You may use the unique link provided to you to resume where you left off.

Confirmation of survey responses:

Within 24 hours of completing and submitting the survey in its entirety, the main utility contact designated below will receive a PDF of your responses for final verification by email. Please review that document, confirm all of your responses one final time, and provide your signature as instructed in the PDF.

Your responses will be evaluated by the CPUC following this final verification.

A. Risk mapping and simulation

AI. A.I Climate scenario modeling and sensitivities Capability 1

QAIa.

A.I.a How sophisticated is utility's ability to estimate the risk of weather scenarios? <u>Clarification</u>: Determining wildfire risk requires the utility to understand the probability of ignition and the consequences of such an ignition while taking various conditions into account (e.g., weather, fuel levels, etc.). Categorizing level of risk requires a set of calculations and judgements to group areas by wildfire risk level whereas quantitatively estimating risk refers to accurately quantifying risk on a continuous spectrum based on a host of wildfire risk drivers (e.g., as a function of ignition probability, propagation scenarios, and communities located in the propagation path).

	i. No clear ability to understand incremental risk under various weather scenarios	ii. Wildfire risk can be reliably determined based on weather and its impacts	iii. Weather scenarios can be reliably categorized by level of risk	iv. Risk for various weather scenarios can be reliably estimated	v. Incremental risk of foreseeable weather scenarios can be accurately and quantitatively estimated

AV. A.V Risk maps and simulation algorithms Capability 5

<u>Clarification on terminology</u>: A risk map is a collection of data sufficient to represent the spatial distribution (e.g., across a geography) of a given type of risk (i.e., the probability of an event and its consequence) and the spatial representation thereof. Risk maps may include maps of the probability of ignition along the utility's grid and may represent the consequences given ignition at various points along the grid. Risk maps may also combine these factors to show a weighted probability and consequence risk level across the utility's grid. Data inputs should include the variables and conditions used to calculate risk for a given point, line, or polygon. The risk mapping algorithm is a methodology or formula for interpreting a risk calculation from these data inputs.

QAVa. A.V.a What is the protocol to update risk mapping algorithms?

	i. No defined process for updating risk mapping algorithms	 ii. Risk mapping algorithms updated based on detected deviations of risk model to ignitions and propagation 	iii. Risk mapping algorithms updated continuously in real time
Current Year	0	۲	\bigcirc
by Start of 2023	\bigcirc	۲	\bigcirc

QAVb.

A.V.b How automated is the mechanism to determine whether to update algorithms based on deviations?

<u>Clarification</u>: For clarification on level of automation please refer to the 'level of systematization and automation' in Table 2 of the Maturity Model. (i) in this case corresponds to level 0; (ii) corresponds to level 1 or 2; (iii) corresponds to level 3; and (iv) corresponds to level 4

CIV. C.IV Risk-based grid hardening and cost efficiency Capability 14

QCIVa.

C.IV.a Does the utility have an understanding of the risk spend efficiency of hardening initiatives? <u>Clarification</u>: 'Hardening initiatives' refers to all initiatives implemented by utility or by other utilities in California

	i. Utility has no clear understanding of the relative risk spend efficiency of hardening initiatives	ii. Utility has an accurate understanding of the relative cost and effectiveness of different initiatives	iii. Utility has an accurate understanding of the relative cost and effectiveness of different initiatives, tailored to the circumstances of different locations on its grid
Current Year	0	۲	\bigcirc
by Start of 2023	\bigcirc	۲	\bigcirc

QCIVb. C.IV.b At what level can estimates be prepared?

	i. Less granular than regional, or not at all	ii. Regional	iii. Circuit-based	iv. Span-based	v. Asset-based
Current Year	0	\bigcirc	۲	\bigcirc	\bigcirc
by Start of 2023	\bigcirc	\bigcirc	۲	\bigcirc	\bigcirc

QC/Vc. C.IV.c How frequently are estimates updated?

	i. Never	ii. Less frequently than annually	iii. Annually or more frequently
Current Year	\bigcirc	۲	\bigcirc
by Start of 2023	\bigcirc	\bigcirc	۲

QCIVd.

C.IV.d What grid hardening initiatives does the utility include within its evaluation? <u>Clarification</u>: 'All Hardening initiatives' refers to all initiatives implemented by utility or by other utilities in California

	i. None	ii. Some	iii. Most	iv. All	v. All, supported by independent testing
Current Year	\bigcirc	۲	\bigcirc	\bigcirc	\bigcirc
by Start of 2023	\bigcirc	\bigcirc	۲	\bigcirc	\bigcirc

QCIVe.

C.IV.e Can the utility evaluate risk reduction synergies from combination of various initiatives?

	i. No	ii. Yes
Current Year	۲	\bigcirc

 \bigcirc

 $oldsymbol{eta}$

CV. C.V Grid design and asset innovation Capability 15

QCVa. C.V.a How are new hardening solution initiatives evaluated?

	i. No established program for evaluating the risk spend efficiency of new hardening initiatives	ii. New initiatives evaluated based on installation into grid and measuring direct reduction in ignition events	iii. New initiatives evaluated based on installation into grid and measuring direct reduction in ignition events, and measuring reduction impact on near-miss metrics	iv. New initiatives independently evaluated, followed by field testing based on installation into grid and measuring direct reduction in ignition events, and measuring reduction impact on near- miss metrics
Current Year	\bigcirc	۲	\bigcirc	\bigcirc
by Start of 2023	\bigcirc	\bigcirc	۲	\bigcirc

QCVb.

C.V.b Are results of pilot and commercial deployments, including project performance, project cost, geography, climate, vegetation etc. shared in sufficient detail to inform decision making at other utilities?

	i. No	ii. Yes, with limited partners	iii. Yes, extensively with industry, academia, and other utilities
Current Year	۲	\bigcirc	\bigcirc
by Start of 2023	\bigcirc	۲	\bigcirc

QCVc. C.V.c Is performance of new initiatives independently audited?

	i. No	ii. Yes
Current Year	۲	\bigcirc
by Start of 2023	۲	\bigcirc

D. Asset management and inspections

D.I Asset inventory and condition assessments *Capability 16*

QDIa. **D.I.a** What information is captured in the equipment inventory database?

	i. There is no service territory- wide inventory of electric lines and equipment including their state of wear or disrepair	ii. There is an accurate inventory of equipment that may contribute to wildfire risk, including age, state of wear, and expected lifecycle	iii. There is an accurate inventory of equipment that may contribute to wildfire risk, including age, state of wear, and expected lifecycle, including records of all inspections and repairs	iv. There is an accurate inventory of equipment that may contribute to wildfire risk, including age, state of wear, and expected lifecycle, including records of all inspections and repairs and up-to- date work plans on expected future repairs and replacements	v. There is an accurate inventory of equipment that may contribute to wildfire risk, including age, state of wear, and expected lifecycle, including records of all inspections and repairs and up-to- date work plans on expected future repairs and replacements wherein repairs and sensor outputs are independently audited
Current Year	\bigcirc	۲	\bigcirc	\bigcirc	\bigcirc
Start of 2023	\bigcirc	\bigcirc	۲	\bigcirc	\bigcirc

QDIb. D.I.b How frequently is the condition assessment updated?

	i. Never	ii. Annually	iii. Quarterly	iv. Monthly	v. Hourly
Current Year	0	۲	\bigcirc	\bigcirc	\bigcirc
Start of 2023	\bigcirc	۲	\bigcirc	\bigcirc	\bigcirc

QDIc.

D.I.c Does all equipment in HFTD areas have the ability to detect and respond to malfunctions?

	i. No system and approach are in place to detect or respond to malfunctions	ii. A system and approach are in place to reliably detect incipient malfunctions likely to cause ignition	iii. Sensorized, continuous monitoring equipment is in place to determine the state of equipment and reliably detect incipient malfunctions likely to cause ignition	iv. Sensorized, continuous monitoring equipment is in place to determine the state of equipment and reliably detect incipient malfunctions likely to cause ignition, with the ability to de-activate electric lines and equipment exhibiting such failure
Current Year	\bigcirc	۲	\bigcirc	\bigcirc
by Start of 2023	\bigcirc	۲	\bigcirc	\bigcirc

QDId. **D.I.d How granular is the inventory?**

	i. There is no inventory	ii. At the span level	iii. At the asset level
Current Year	\bigcirc	\bigcirc	۲
by Start of 2023	\bigcirc	\bigcirc	۲

DII. D.II Asset inspection cycle Capability 17

QDIIa. **D.II.a How frequent are your patrol inspections?**

	i. Less frequent than regulations require	ii. Consistent with minimum regulatory requirements	iii. Above minimum regulatory requirements, with more frequent inspections for highest risk equipment
Current Year	0	۲	0
by Start of 2023	\bigcirc	\bigcirc	۲

QDIIb. D.II.b How are patrol inspections scheduled?

	i. Based on annual or periodic schedules	ii. Based on up-to- date static maps of equipment types and environment	iii. Risk, as determined by predictive modeling of equipment failure probability and risk causing ignition	iv. Risk, independently determined by predictive modeling of equipment failure probability and risk causing ignition
Current Year	۲	\bigcirc	\bigcirc	\bigcirc
by Start of 2023	\bigcirc	۲	\bigcirc	\bigcirc

QDIIc. **D.II.c What are the inputs to scheduling patrol inspections?**

	i. At least annually updated or verified static maps of equipment and environment	ii. Predictive modeling of equipment failure probability and risk	iii. Predictive modeling supplemented with continuous monitoring by sensors	iv. Outdated static maps
Current Year	۲	\bigcirc	\bigcirc	\bigcirc
by Start of 2023	۲	\bigcirc	\bigcirc	\bigcirc

	i. Less frequent than regulations require	ii. Consistent with minimum regulatory requirements	iii. Above minimum regulatory requirements, with more frequent inspections for highest risk equipment
Current Year	\bigcirc	\bigcirc	۲
by Start of 2023	\bigcirc	\bigcirc	۲

QDIIe. D.II.e How are detailed inspections scheduled?

	i. Based on annual or periodic schedules	ii. Based on up-to- date static maps of equipment types and environment	iii. Risk, as determined by predictive modeling of equipment failure probability and risk causing ignition	iv. Risk, independently determined by predictive modeling of equipment failure probability and risk causing ignition
Current Year	۲	\bigcirc	\bigcirc	\bigcirc
by Start of 2023	\bigcirc	۲	\bigcirc	\bigcirc

QDIIf. **D.II.f What are the inputs to scheduling detailed inspections?**

	i. At least annually updated or verified static maps of equipment and environment	ii. Predictive modeling of equipment failure probability and risk	iii. Predictive modeling supplemented with continuous monitoring by sensors	iv. Outdated static maps
Current Year	۲	\bigcirc	\bigcirc	\bigcirc
by Start of 2023	۲	\bigcirc	\bigcirc	\bigcirc

QDIIg. **D.II.g How frequent are your other inspections?**

	i. Less frequent than regulations require	ii. Consistent with minimum regulatory requirements	iii. Above minimum regulatory requirements, with more frequent inspections for highest risk equipment	
Current Year	\bigcirc	۲	\bigcirc	
by Start of 2023	\bigcirc	۲	\bigcirc	

QDIIh. **D.II.h How are other inspections scheduled?**

	i. Based on annual or periodic schedules	ii. Based on up-to- date static maps of equipment types and environment	iii. Risk, as determined by predictive modeling of equipment failure probability and risk causing ignition	iv. Risk, independently determined by predictive modeling of equipment failure probability and risk causing ignition
Current Year	۲	\bigcirc	\bigcirc	\bigcirc
by Start of 2023	\bigcirc	۲	\bigcirc	\bigcirc

QDIIi. **D.II.i What are the inputs to scheduling other inspections?**

	i. At least annually updated or verified static maps of equipment and environment	ii. Predictive modeling of equipment failure probability and risk	iii. Predictive modeling supplemented with continuous monitoring by sensors	iv. Outdated static maps
Current Year	۲	\bigcirc	\bigcirc	\bigcirc
by Start of 2023	۲	\bigcirc	\bigcirc	\bigcirc

DIII. D.III Asset inspection effectiveness Capability 18

QDIIIa.

D.III.a What items are captured within inspection procedures and checklists?

	i. Patrol, detailed, enhanced, and other inspection procedures and checklists do not include all items required by statute and regulations	ii. Patrol, detailed, enhanced, and other inspection procedures and checklists include all items required by statute and regulations	iii. Patrol, detailed, enhanced, and other inspection procedures and checklists include all items required by statute and regulations, and includes lines and equipment typically responsible for ignitions and near misses
Current Year	0	۲	\bigcirc
by Start of 2023	0	\bigcirc	۲

QDIIIb. **D.III.b How are procedures and checklists determined?**

	i. Based on statute and regulatory guidelines only	ii. Based on predictive modeling based on vegetation and equipment type, age, and condition	iii. Based on predictive modeling based on equipment type, age, and condition and validated by independent experts	iv. Based on predictive modeling based on equipment type, age, and condition and validated by independent experts, with dynamic adjustments in real time based on deficiencies found during inspection
Current Year	۲	0	0	0
by Start of 2023	۲	\bigcirc	\bigcirc	\bigcirc

QDIIIc.

D.III.c At what level of granularity are the depth of checklists, training, and procedures customized?

	i. Across the service territory	ii. Across a region	iii. At the circuit level	iv. At the span level	v. At the asset level
Current Year	۲	\bigcirc	\bigcirc	\bigcirc	\bigcirc
by Start of 2023	۲	\bigcirc	\bigcirc	\bigcirc	\bigcirc

DIV. D.IV Asset maintenance and repair Capability 19

QDIVa. D.IV.a What level are electrical lines and equipment maintained at?

	i. Electric lines and equipment not consistently maintained at required condition over multiple circuits	ii. Electrical lines and equipment maintained as required by regulation	 iii. Electrical lines and equipment maintained as required by regulation, and additional maintenance done in areas of grid at highest wildfire risk based on detailed risk mapping
Current Year	۲	\bigcirc	\bigcirc
by Start of 2023	\bigcirc	۲	\bigcirc

QDIVb. D.IV.b How are service intervals set?

	i. Based on wildfire risk in relevant area	ii. Based on wildfire risk in relevant circuit	iii. Based on wildfire risk in relevant circuit, as well as real-time monitoring from sensors	iv. None of the above
Current Year	۲	\bigcirc	\bigcirc	\bigcirc
by Start of 2023	\bigcirc	۲	\bigcirc	\bigcirc

QDIVc. **D.IV.c What do maintenance and repair procedures take into account?**

	ii. Wildfire risk, performance history, and past operating i. Wildfire risk conditions iii. None of the above			
Current Year	۲	0	0	
by Start of 2023	\bigcirc	۲	\bigcirc	

DV. D.V QA/QC for asset maintenance Capability 20

			iii. Through an established and demonstrably functioning audit process to manage and confirm work completed by	iv. Through an established and demonstrably functioning audit process to manage and confirm work completed by
	i. Lack of controls for auditing work completed, including inspections, for employees or subcontractors	ii. Through an established and functioning audit process to manage and confirm work completed by subcontractors	subcontractors, where contractor activity is subject to semi- automated audits using technologies capable of sampling the contractor's work (e.g., LiDAR scans, photographic evidence)	subcontractors, where contractor activity is subject to automated audits using technologies capable of sampling the contractor's work (e.g., LiDAR scans, photographic evidence)
Current Year	\bigcirc	۲	0	0
by Start of 2023	\bigcirc	\bigcirc	۲	\bigcirc

QDVb. **D.V.b Do contractors follow the same processes and standards as utility's own employees?**

	i. No	ii. Yes
Current Year	0	۲
by Start of 2023	0	۲

QDVc.

D.V.c How frequently is QA/QC information used to identify deficiencies in quality of work performance and inspections performance?

	i. Never	ii. Sporadically	iii. On an ad hoc basis	iv. Regularly	v. Real-time
Current Year	0	\bigcirc	\bigcirc	۲	0
by Start of 2023	\bigcirc	\bigcirc	\bigcirc	۲	\bigcirc

QDVd. **D.V.d How is work and inspections that do not meet utility-prescribed standards remediated?**

	i. Lack of effective remediation for ineffective inspections or low-quality work	ii. QA/QC information is used to identify systemic deficiencies in quality of work and inspections	iii. QA/QC information is used to identify systemic deficiencies in quality of work and inspections and recommend training based on weaknesses	iv. QA/QC information is used to identify systemic deficiencies in quality of work and inspections, grade individuals, and recommend specific pre- made and tested training based on weaknesses
Current Year	0	۲	\bigcirc	0
by Start of 2023	0	\bigcirc	۲	\bigcirc

QDVe. **D.V.e Are workforce management software tools used to manage and confirm work completed by subcontractors?**

	i. No	ii. Yes
Current Year	\bigcirc	۲
by Start of 2023	\odot	۲

E. Vegetation management and inspections

EI. E.I Vegetation inventory and condition assessments Capability 21

QEIa. E.I.a What information is captured in the inventory?

	i. There is no vegetation inventory sufficient to determine vegetation clearances across the grid at the time of the last inspection	ii. Centralized inventory of vegetation clearances based on most recent inspection	iii. Centralized inventory of vegetation clearances, including predominant vegetation species and individual high risk-trees across grid	iv. Centralized inventory of vegetation clearances, including individual vegetation species and their expected growth rate , as well as individual high risk-trees across grid	v. Centralized inventory of vegetation clearances, including individual vegetation species and their expected growth rate, as well as individual high risk-trees across grid. Includes up- to- date tree health and moisture content to determine risk of ignition and propagation
Current Year	0	۲	\bigcirc	\bigcirc	\bigcirc
by Start of 2023	\bigcirc	\bigcirc	۲	\bigcirc	\bigcirc

QEIb. E.I.b How frequently is the inventory updated?

	i. Never	ii. Annually	iii. Within 1 month of collection	iv. Within 1 week of collection	v. Within 1 day of collection
Current Year	\bigcirc	۲	\bigcirc	\bigcirc	\bigcirc

EIV. **E.IV Vegetation grow-in mitigation** *Capability 24*

Q*EIVa.* E.IV.a How does utility clearance around lines and equipment perform relative to expected standards?

	i. Utility often fails to maintain minimum statutory and regulatory clearances around all lines and equipment	ii. Utility meet minimum statutory and regulatory clearances around all lines and equipment	iii. Utility exceeds minimum statutory and regulatory clearances around all lines and equipment
Current Year	\bigcirc	۲	\bigcirc
by Start of 2023	\bigcirc	۲	\bigcirc

QEIVb. E.IV.b Does utility meet or exceed minimum statutory or regulatory clearances during all seasons?

	i. No	ii. Yes
Current Year	\odot	۲
by Start of 2023	\odot	۲

QEIVc. **E.IV.c** What modeling is used to guide clearances around lines and equipment?

	i. Ignition risk modeling	ii. Ignition and propagation risk modeling	iii. None of the above
Current Year	0	\bigcirc	۲
by Start of 2023	\bigcirc	\bigcirc	۲

QEIVd. **E.IV.d** What biological modeling is used to guide clearances around lines and equipment?

	i. Species growth rates and species limb failure rates	ii. Species growth rates and species limb failure rates, cross referenced with local climatological conditions	iii. None of the above
Current Year	\bigcirc	\bigcirc	۲
by Start of 2023	\bigcirc	\bigcirc	۲

QE/Ve. E.IV.e Are community organizations engaged in setting local clearances and protocols?

	i. No	ii. Yes
Current Year	۲	\bigcirc
by Start of 2023	۲	\bigcirc

QEIVf.

E.IV.f Does the utility remove vegetation waste along its right of way across the entire grid?

	i. No	ii. Yes
Current Year	۲	0
by Start of 2023	۲	\bigcirc

QE/Vg. E.IV.g How long after cutting vegetation does the utility remove vegetation waste along right of way?

	i. Not at all	ii. Longer than 1 week	iii. Within 1 week or less	iv. On the same day
Current Year				
by Start of 2023				

QEIVh.

E.IV.h Does the utility work with local landowners to provide a cost-effective use for cutting vegetation?

	i. No	ii. Yes
Current Year		
by Start of 2023		

QEIVi.

E.IV.i Does the utility work with partners to identify new cost-effective uses for vegetation, taking into consideration environmental impacts and emissions of vegetation waste?

	i. No	ii. Yes
Current Year		
by Start of 2023		

EV. E.V Vegetation fall-in mitigation Capability 25

i. Utility does not remove ii. Utility removes some

vegetation outside of right vegetation outside of right

of ways

iv. Utility systematically removes vegetation outside of right of way, informing relevant communities of removal

iii. Utility systematically

removes vegetation

outside of right of way

Current Year

by Start of 2023

QEVb. E.V.b How is potential vegetation that may pose a threat identified?

of way

i. No specific process in place to systematically identify trees likely to pose a risk ii. Based on the height of trees with potential to make contact with electric lines and equipment	iii. Based on the probability and consequences of impact on electric lines and equipment as determined by risk modeling	iv. Based on the probability and consequences of impact on electric lines and equipment as determined by risk modeling, as well as regular and accurate systematic inspections for high-risk trees outside the right of way or environmental and climatological conditions contributing to increased risk
--	---	--

FI. **F.I Protective equipment and device settings** Capability 27

i. Utility does not make changes to adjustable equipment in response to high wildfire threat conditions ii. Utility increases sensitivity of risk reduction elements during high threat weather conditions iii. Utility increases sensitivity of risk reduction elements during high threat weather conditions and monitors near misses iv. Utility increases sensitivity of risk reduction elements during high threat weather conditions **based on risk mapping** and monitors near misses

Current Year

by Start of 2023

QFIb.

F.I.b Is there an automated process for adjusting sensitivity of grid elements and evaluating effectiveness?

Clarification: For clarification on level of automation please refer to the 'level of systematization and automation' in Table 2 of the Maturity Model. (i) in this case corresponds to level 0; (ii) corresponds to level 1 or 2; (iii) corresponds to level 3 or 4

i. No automated process

ii. Partially automated process

iii. Fully automated process

Current Year

by Start of 2023

QFIc.

F.I.c Is there a predetermined protocol driven by fire conditions for adjusting sensitivity of grid elements?

i. No

ii. Yes

Current Year by Start of 2023

FII. F.II Incorporating ignition risk factors in grid control Capability 28

QFIIa.

F.II.a Does the utility have a clearly explained process for determining whether to operate the grid beyond current or voltage designs?

ii. Yes

Current Year by Start of 2023

QFIIb.

F.II.b Does the utility have systems in place to automatically track operation history including current, loads, and voltage throughout the grid at the circuit level?

	i. No		ii. Yes	
Current Year				
by Start of 2023				
Q <i>FIIc.</i> F.II.c Does the utility use pre maintenance, rebuild, or repla reviewed?				
	i. Modeling is not used	ii. Modeling is used, but not evaluated by external experts	iii. Modeling is used, and the model is evaluated by external experts and verified by historical data	
Current Year				
by Start of 2023				
QFIId. F.II.d When does the utility operate the grid above rated voltage and current load?				
	i. During any conditions	ii. Only in conditions that are unlikely to cause wildfire	iii. Never	
Current Year				
by Start of 2023				
FIII. F.III PSPS op. m	odel and con	sequence mit	igation	

QFIIIa. F.III.a How effective is PSPS event forecasting?

Capability 29

i. PSPS event **frequently** forecasted incorrectly

ii. PSPS event generally forecasted accurately with fewer than 50% of predictions being false positives

iii. PSPS event generally forecasted accurately with fewer than accurately with fewer than 33% of predictions being false positives

iv. PSPS event generally forecasted 25% of predictions being false positives

Current Year

by Start of 2023

	i. Affected customers are poorly communicated to , with a significant portion not communicated to at all	ii. PSPS event are communicated to >95% of affected customers and >99% of medical baseline customers in advance of PSPS action	 iii. PSPS event are communicated to >98% of affected customers and >99.5% of medical baseline customers in advance of PSPS action 	iv. PSPS event are communicated to >99% of affected customers and >99.9% of medical baseline customers in advance of PSPS action	v. PSPS event are communicated to >99.9% of affected customers and 100% of medical baseline customers in advance of PSPS action
Current Year					
by Start of 2023					
QFIIIc. F.III.c During PSPS eve	ents, what percer	nt of customers c	omplain?		
	i. 1% or m	nore	ii. Less than 1%	ili. Les	s than 0.5%
Current Year by Start of 2023					
<i>QFIIId.</i> F.III.d During PSPS events, does the utility's website go down?					
		i. No		ii. Yes	
Current Year by Start of 2023					
QF///e. F.III.e During PSPS events, what is the average downtime per customer?					
Current Year by Start of 2023	i. More than 1 ho	our ii. Less than 1 hou	iii. Less than 0.5 r hours	iv. Less than 0.25 hours	v. Less than 0.1 hours

QFIIIf.

F.III.f Are specific resources provided to customers to alleviate the impact of the power shutoff (e.g., providing backup generators, supplies, batteries, etc.)?

	i. No	ii. Yes
Current Year		
by Start of 2023		

FIV. **F.IV Protocols for PSPS invitation** Capability 30

QF/Va. F.IV.a Does the utility have explicit thresholds for activating a PSPS?

 i. Utility has explicit policies and explanation for the thresholds
 i. Utility has no clearly explained threshold for PSPS activation
 ii. Utility has explicit policies and explanation for the thresholds
 above which PSPS is activated as a measure of last resort

 iii. Utility has explicit policies and explanation for the thresholds above which PSPS is activated, but maintains grid in sufficiently low risk condition to not require any PSPS activity, though may deenergize specific circuits upon detection of damaged condition of electrical lines and equipment, or contact with foreign objects

Current Year

by Start of 2023

QFIVb.

F.IV.b Which of the following does the utility take into account when making PSPS decisions? Select all that apply

ii. A partially automated system which recommends circuits for which PSPS should be activated and is validated by SMEs

Current Year

by Start of 2023

QFIVc. **F.IV.c Under which circumstances does the utility de-energize circuits? Select all that apply.**

i. SME opinion

i. Upon detection of damaged conditions of electric equipment ii. When circuit presents a safety risk to suppression or other personnel iii. When equipment has come into contact with foreign objects posing ignition risk

iv. Additional reasons not listed

Current Year

by Start of 2023

QFIVd.

F.IV.d Given the condition of the grid, with what probability does the utility expect any large scale PSPS events affecting more than 10,000 people to occur in the coming year? Clarification: For the 'Current Year' response option, please take "the coming year" as 2021. For the 'by Start of 2023' response option, please take "the coming year" as 2023.

> i. Less than 5 % - Grid is in sufficiently low risk condition that PSPS events will not be required, and the only circuits which may require de- energization have sufficient redundancy that energy supply to customers will not be disrupted

ii. Greater than 5% - Grid condition paired with risk indicates that PSPS may be necessary in 2021 in some areas

Current Year

by Start of 2023

FV. **F.V Protocols for PSPS re-energization** Capability 31

QFVa. F.V.a Is there a process for inspecting de-energized sections of the grid prior to re- energization?

> i. **Inadequate process** for inspecting de- energized sections of the grid prior to re- energization

ii. Existing process for accurately inspecting de- energized sections of the grid prior to re- energization iii. Existing process for accurately inspecting de- energized sections of the grid prior to reenergization, augmented with sensors and aerial tools

> iv. Primarily automated, minimal manual inputs

Current Year

by Start of 2023

QFVb.

F.V.b How automated is the process for inspecting de-energized sections of the grid prior to reenergization?

Clarification: For explanation on level of automation please refer to the 'level of systematization and automation' in Table 2 of the Maturity Model. (i) in this case corresponds to level 0; (ii) corresponds to level 1 or 2; (iii) corresponds to level 3; and (iv) corresponds to level 4

i. Manual process, not	ii. Partially	iii. Mostly
automated at all	automated (<50%)	automated (≥50%)

Current Year

by Start of 2023

QFVc.

F.V.c What is the average amount of time that it takes you to re-energize your grid from a PSPS once weather has subsided to below your de-energization threshold?

	i. Longer than 24 hours	ii. Within 24 hours	iii. Within 18 hours	iv. Within 12 hours	v. Within 8 hours
Current Year					

by Start of 2023

QFVd.

F.V.d What level of understanding of probability of ignitions after PSPS events does the utility have across the grid?

i. No probability estimate of after event ignitions

ii. Some probability estimates exist

 iii. Utility has accurate quantitative understanding of ignition risk following re- energization, by asset, validated by historical data and near misses

Current Year

FVI. **F.VI** Ignition prevention and suppression Capability 32

QFVIa. F.VI.a Does the utility have defined policies around the role of workers in suppressing ignitions?

> i. Utility has no policies governing what crews' roles are in suppressing **policies** about the role of crews at ianitions

ii. Utilities have **explicit** the site of ignition

iii. Utilities have explicit policies about the role of crews, including contractors and subcontractors, at the site of ignition

Current Year

by Start of 2023

QFVIb. F.VI.b What training and tools are provided to workers in the field?

i. Crews are untrained	ii. Training and communications tools are provided to immediately report ignitions caused by workers or in immediate vicinity of workers	 iii. All criteria in option (ii) met; In addition, suppression tools and training to suppress small ignitions caused by workers or in immediate vicinity of workers are provided 	iv. All criteria in option (iii) met; In addition, communication tools function without cell reception and training by suppression professionals is provided	v. All criteria in option (iv) met and apply to contractors as well as utility workers
---------------------------	--	---	--	--

Current Year

by Start of 2023

QFVIc.

F.VI.c In the events where workers have encountered an ignition, have any Cal/OSHA reported injuries or fatalities occurred in in the last year?

Clarification: For this year, please identify whether any major injuries or fatalities have occurred in 2020. For three years from now, please specify whether you think there is a chance that major injuries or fatalities could occur in 2023.

i. No

ii. Yes

Current Year

by Start of 2023

QFVId.

F.VI.d Does the utility provide training to other workers at other utilities and outside the utility industry on best practices to minimize, report and suppress ignitions? Clarification: An example of workers outside utility industry might be workers at a vegetation management company who prune trees near utility equipment

G. Data governance

GI. **G.I Data collection and curation** *Capability* 33

QGla.

G.I.a Does the utility have a centralized database of situational, operational, and risk data? Clarification: Question is asking whether utility centralizes most of its situational, operational, and risk data in a single database

i. No

i. No

ii. Yes

Current Year

by Start of 2023

QGIb.

G.I.b Is the utility able to use advanced analytics on its centralized database of situational, operational, and risk data to make operational and investment decisions? Clarification: In this case, advanced analytics refers to analysis integrating different types of data from this centralized database in a sufficiently reliable way to create a detailed, quantitative and holistic picture of tradeoffs to be weighed in operational or investment decisions

i.	No	

ii. Yes, but only for short term decision making

iii. Yes, for both short term and long-term decision making

Current Year

by Start of 2023

QGIc.

G.I.c Does the utility collect data from all sensored portions of electric lines, equipment, weather stations, etc.?

Current Year

by Start of 2023

i. No

	base of situational, operati ocols with a wide variety of		le to ingest and share data
	i. No		ii. Yes
Current Year			
by Start of 2023			
QG/e. G.I.e Does the utility ide	entify highest priority additi	onal data sources to i	mprove decision making?
	i. No	ii. Yes	iii. Yes, with plans to incorporate these into centralized database of situational, operational and risk data
Current Year			
by Start of 2023			
Q <i>Glf.</i> G.I.f Does the utility sha California and beyond?	are best practices for datab	ase management and	use with other utilities in
	i. No	ii. Yes	iii. Yes, with specific processes to do so in place
Current Year			

GII. **G.II Data transparency and analytics** *Capability 34*

QGIIa.

by Start of 2023

G.II.a Is there a single document cataloguing all fire-related data and algorithms, analyses, and data processes?

Current Year

by Start of 2023

QGIIb.

G.II.b Is there an explanation of the sources, cleaning processes, and assumptions made in the single document catalog?

i. No

QGIIc.

G.II.c Are all analyses, algorithms, and data processing explained and documented? Is there a system for sharing data in real time across multiple levels of permissions?

i. Analyses, algorithms, ii and data processing **are not** documented p

ii. Analyses, algorithms, and data processing **are** documented iii. Analyses, algorithms, and data processing are documented and explained iv. Analyses, algorithms, and data processing are documented and explained, including sensitivities for each type of analysis and data

Current Year

by Start of 2023

QGIId. **G.II.d** Is there a system for sharing data in real time across multiple levels of permissions?

i. No system capable of sharing data in real time across multiple levels of permissions ii. System is capable of sharing across at least two levels of permissions, including a.) utilityregulator permissions, and b.) first responder permissions iii. System is capable of sharing across at least three levels of permissions, including a.) utilityregulator permissions, b.) first responder permissions, and c.) public data sharing

Current Year

by Start of 2023

QGIIe.

G.II.e Are the most relevant wildfire related data algorithms disclosed? Clarification: Question is asking whether all algorithms or decision making process used to inform decision making around investment choices, risk mitigation choices, and emergency response are disclosed

i. No

ii. Yes, disclosed to regulators and other relevant stakeholders upon request

iii. Yes, disclosed publicly in WMP upon request iv. Disclosed publicly as information becomes available (regardless of regulatory request)

Current Year

by Start of 2023

GIII. G.III Near-miss tracking Capability 35

QGIIIa.

G.III.a Does the utility track near miss data for all near misses with wildfire ignition potential? Clarification: Recall that near miss is defined as an event with significant probability of ignition, including wires down, contacts with objects, line slap, events with evidence of significant heat generation, and other events that cause sparking or have the potential to cause ignition.

QGIIIb.

Current Year by Start of 2023

G.III.b Based on near miss data captured, is the utility able to simulate wildfire potential given an ignition based on event characteristics, fuel loads, and moisture? i. No ii. Yes Current Year by Start of 2023 *QGIIIC.*

G.III.c Does the utility capture data related to the specific mode of failure when capturing near- miss data?

i. No

QGIIId. **G.III.d** Is the utility able to predict the probability of a near miss in causing an ignition based on a set of event characteristics?

	i. No	ii. Yes
Current Year		
by Start of 2023		

QGIIIe. G.III.e Does the utility use data from near misses to change grid operation protocols in real time?

	i. No	ii. Yes
Current Year		
by Start of 2023		

GIV. **G.IV Data sharing with the research community** *Capability 36*

i. Utility fails to make disclosures

ii. Utility makes required disclosures, but does not share data beyond what is required

iii. Utility makes required disclosures and shares data beyond what is required

ii. Yes

Current Year

by Start of 2023

QGIVb.

G.IV.b Does the utility in engage in research?

Clarification: Here, 'research' broadly refers to collaborative research (e.g. with other utilities, academics, or the government) or to independent research where the findings are made available outside parties (such as academics, other utilities, the government or the public).

Current Year by Start of 2023	i. Utility does not participate in collaborative research	ii. Utility participates in collaborative research	iii. Utility funds and participates in both independent and collaborative research	iv. Utility funds and participates in both independent and collaborative research, and ensures that research, where possible, is abstracted and applied to other utilities
Q <i>GIVc.</i> G.IV.c What subjects do	es utility research a	ii. Utility ignited w		iii. None of the above
Current Year by Start of 2023				
QGIVd. G.IV.d Does the utility pr research? Clarification: Promoting be report or detailing results a more or less effective	est practices could tak	ke various forms – for	example, writing ar	nd publicly releasing a

Current Year					

by Start of 2023

QHIVc. **How frequently are estimates updated?**

i. Never

ii. Less frequently than annually iii

iii. Annually or more frequently

Current Year

by Start of 2023

i. None	ii. Some commercially available grid hardening initiatives	iii. Most commercially available grid hardening initiatives	iv. All commercially available grid hardening initiatives	v. All commercially available grid hardening initiatives, as well as those initiatives that are lab tested

Current Year

by Start of 2023

QHIVe. H.IV.e Can the utility evaluate risk reduction effects from the combination of various initiatives?

i. No

ii. Yes

Current Year

by Start of 2023

HV. **H.V** Portfolio-wide initiative allocation methodology Capability 41

QHVa. H.V.a To what extent does the utility allocate capital to initiatives based on risk-spend efficiency (**RSE**)?

> i. Utility does not base capital allocation on RSE

ii. Utility considers estimates of RSE when allocating capital

iii. Accurate RSE are used to determine capital allocation within categories only (e.g. to choose the best vegetation management management and initiative)

iv. Accurate RSE estimates for all initiatives estimates for all initiatives are used to determine capital allocation across portfolio (e.g. prioritizing between vegetation management and grid hardening)

Current Year

by Start of 2023

QHVb. H.V.b What information does the utility take into account when generating RSE estimates?

> i. Average estimate of RSE by initiative category

ii. Specific information by initiative, including state of equipment and location where initiative will be implemented

iii. Specific information by initiative at the asset level, including state of specific assets and location where initiative will be implemented

Current Year

by Start of 2023

i. Utility does not verify RSE estimates

i. RSE estimates are verified by historical or experimental pilot data

iii. RSE estimates are verified by historical or experimental pilot data and confirmed by independent experts or other utilities in CA

Current Year

by Start of 2023

QHVd.

H.V.d Does the utility take into consideration impact on safety, reliability, and other priorities when making spending decisions?

i. No

ii. Yes

Current Year by Start of 2023

HVI. H.VI Portfolio-wide innovation in new wildfire initiatives Capability 42

QHVIa. H.VI.a How does the utility develop and evaluate the efficacy of new wildfire initiatives?

	iii. Utility uses pilots and	iv. Utility uses pilots, followed by in-field testing,
Utility uses pilots and easures direct reduction in ignition events	measures direct reduction in ignition events and near-misses.	measuring reduction in ignition events and near- misses.

Current Year

by Start of 2023

QHVIb.

H.VI.b How does the utility develop and evaluate the risk spend efficiency of new wildfire initiatives? Clarification: TCO is total cost of ownership over the expected useful life of an asset, including purchase, operation and maintenance. In this question, total cost of ownership refers to the spend portion of the evaluation of risk spend efficiency, while risk reduction is evaluated separately.

i. No program in place

ii. Utility uses total cost of ownership

Current Year

by Start of 2023

QHV/c. H.VI.c At what level of granularity does the utility measure the efficacy of new wildfire initiatives?

i. None ii

ii. Entire territory

iii. Circuit

Clarification: Reviews here ref in making a decision about wh effectively. Criteria might inclu-	ether to implement that initiative and h	tiatives which would assist another utility help them determine how to do so technical feasibility, effectiveness, risk
