

Undergrounding A Safer, Stronger and More Affordable Energy Future

FEBRUARY 2024

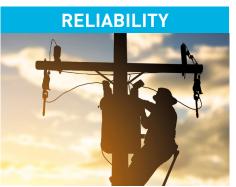

To prevent wildfires and help keep the power on, PG&E is installing 10,000 miles of powerlines underground.

Benefits of Undergrounding

Undergrounding is one of the most effective ways to reduce wildfire risk and long-term costs to customers.

Nearly eliminates wildfire ignition risk at that location

Reduces wildfire safety and weather-related power outages

Lowers ongoing vegetation management and maintenance costs

Undergrounding Progress & Workplans

We are focusing our undergrounding efforts in areas where we can have the greatest impact on reducing wildfire risk.

of undergrounding since 2021

* Includes Butte rebuild mileage.

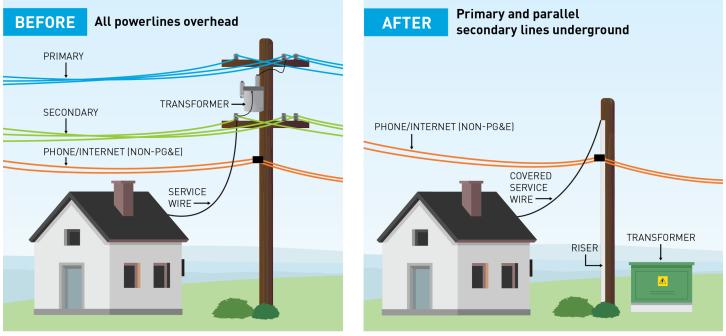

of additional undergrounding from 2024-2026

We are moving powerlines that have the highest ignition risk underground.

This generally includes undergrounding the powerlines that deliver electricity to your neighborhood. Some equipment, like the service line connecting to your home or non-PG&E-owned telecomm lines, will remain. Additional aboveground equipment may need to be installed.

For illustrative purposes only. Not to scale.

Working together

We will keep customers and communities informed throughout this process. We will send details and any schedule updates in communications including letters, emails, text messages and phone calls.
