**PG&E CORPORATION STATEMENT ON INTRODUCTION OF
AMERICA'S CLIMATE SECURITY ACT OF 2007**

(Washington DC) – PG&E Corporation (NYSE: PCG) Vice President of Corporate Environmental and Federal Affairs, Steven Kline, issued the following comments related to today's introduction of America's Climate Security Act of 2007 by Senator Joseph Lieberman, I-D Connecticut, and Senator John Warner, R-Virginia.

“We believe America's Climate Security Act provides a solid starting point for constructively advancing a comprehensive, national response to and policy on climate change. Senators Lieberman and Warner have developed a thoughtful proposal that recognizes the urgent need for action by designing a program to achieve significant emission reductions from all sectors of the economy. The bill includes provisions that prioritize energy efficiency and technology development and deployment, as well as innovative ideas to protect electricity consumers, manage overall program costs, and provide states with the resources to help address the unique needs of their communities and citizens as we transition to a low-carbon economy and adapt to a changing environment. America's Climate Security Act takes significant steps toward recognizing that a national program must balance the economic, technology, and environmental challenges of combating climate change.”

“We look forward to working with Senators Lieberman and Warner, Chairman Boxer and the other members of the Environment and Public Works Committee to further refine these concepts, ensuring that the final bill that emerges from the Committee is environmentally effective, economically sustainable and both encourages and supports the rapid development and deployment of the most efficient, lowest-emitting technologies throughout the economy.”
