

PG&E - Marketing & Communications | Your Energy Dollars at Work in Fremont at the Newark Substation

For every one gigawatt of load that we bring on, we're able to reduce customer bills by 1%. Beneficial load growth is the real deal.

PG&E is adding 75 megawatts of capacity at the Newark substation, serving high-tech industrial customers like Quantum Manufacturing.

Energy is the backbone of our operation. With the energy provided by PG&E, we're able to run 24/7 and develop cutting-edge technology to make us competitive on the world stage.

Fremont is a city whose best days are ahead of it. We expect to add about 10,000 new jobs in manufacturing over the coming years because of the work that we are doing with PG&E to upgrade and expand several of our substations. I'm excited for what the future holds.

It is so important that we invest in the local power grid. It's an investment for our future.
