

## **PG&E - Marketing & Communications | The Bulldog Trencher: 2X faster, saving \$40,000 a day**

Yeah, they call this the Bulldog Trencher. They can get up to 800,000, 900,000 feet a day with this. Up here in the terrain that we're in, undergrounding is so important for the community.

When we move the lines underground, we reduce wildfire risk by 98% Technology like the Bulldog is being used throughout our service territory because it is so efficient. This can increase our production by about 50% a day, and that equates to about \$40,000 savings a day in production costs.

We've seen some terrible fires over the years. And so I think about my family. As a local contractor, we take a lot of pride in what we're doing. It's our home that we're helping make safer.

We're not just keeping our customers safe from wildfire, we're also improving their reliability. The Bulldog has been a game changer.

We dug the trench. They put in the conduit. By the end of the day, you drive right over the top of it. It really does the job.
