

PG&E System Upgrade

4kV to 12kV Upgrade

Phase 3: Caledonia, Bonita, Marie, Napa, Bee, Litho, Locust, and Turney Streets;
Girard, Filbert, and Cazneau Avenues; and Filbert Court

April 16, 2024

Introductions

PG&E

- Austin Sharp, Senior Manager of the North Coast Region
- Mark Van Gorder, Government and Community Partnerships Liaison
- Steve Jackson, Project Manager
- Lindsey Ambrosini, Customer Outreach Supervisor
- John Baston, Customer Outreach Specialist

Wilson Construction, Construction Contractor

- Adam Peart, Lead Project Manager
- Fred Raunig, General Foreman

Craig Communications, Community Outreach Consultant

- Sarah Larsen, Associate

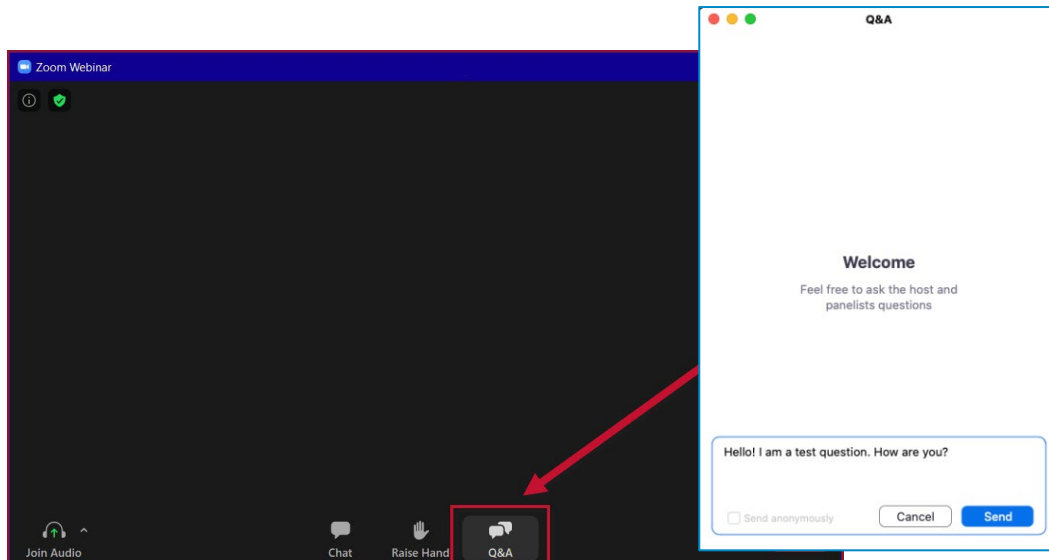

How to Ask Questions

Type your questions into the Q&A box:

- Press the **Q&A** button on the bottom of the screen to type and submit your question
 - If you can't see the Q&A box, click on the three dots on the right hand of the screen to see more options

Text your question:

- If you aren't able to type your question in the Q&A box, you may text your question to **Sarah Larsen** at **510-778-5816**

We can only answer general questions about this project and not questions about your specific property.

For questions about your home, please contact our email or hotline.

4 kV to 12kV Upgrade - Project Overview

The current electrical system (4kV) has served its purpose, but is now outdated technology

- **Substation built in 1929 and upgraded in 1946**

- The new 12kV system will have more capacity to support high-demand technology like ADUs and EV charging, and helps meet goals in the City's Climate Action Plan

- **The new system will:**

- Improve reliability of service
- Support current electric demand
- Meet future electric demands as Sausalito grows

- **Work conducted in 6 phases**

- Phase 1 is complete – Sausalito substation
- Phases 2 – Began in March and is currently underway
- Phase 3 – Slated to begin May

Phase 3 starting
on May 13, 2024

4kV to 12kV Upgrade – Phase 3 Work

Work begins May 13 – May 24

- **Work hours 8 am – 5 pm, Monday through Friday**
- **Crew of 5-6 individuals and supporting heavy equipment**
 - To ensure the safety of residents and workers, please do not enter the work area
 - For the fastest response, please direct questions to **1-800-400-5722** or **SausalitoCutoverProject@pge.com**
- **Work planned:**
 - Vegetation management
 - Replacing 18 poles
 - Repairing 21 poles
 - Replacing 21 transformers
 - Site restoration

What You Will See During Construction

- **Noise:** You may notice noise from equipment
- **Traffic:** Work will require temporary lane closures, detours, and closure of on-street parking
 - Will post No Parking signs at least 24 hours in advance and route traffic around work areas
- **Vegetation Management:** Prior to work starting, we will identify and remove all flammable material, brush, limbs, and foliage around electric poles and overhead lines
- **Driveway Access:** Driveway access may be impacted when we are working outside of your house, but can provide access within minutes of request
- **Service:** Your water, gas, phone, internet, trash collection, and access to public transportation will not be impacted by this work. Mail and package delivery may be impacted by work that required street closures.
- **Power Outages:** There will be planned power outages associated with this work as we will need to turn off the power to connect the new equipment. We are working with the City to determine the dates of these outages – you will receive an advanced letter with the outage dates when they are scheduled.

What You Will See When Upgrade is Complete

- Some of the planned work will require the installation of poles that are 5-10 feet taller than existing poles and new equipment, like transformers and king pins, that may change the profile of poles
 - Needed to meet California Public Utility Commission standards and accommodate larger equipment
- Location of some existing poles may be adjusted as part of the replacement process, which has the potential to slightly alter views
 - Limited flexibility where equipment can be placed for safety / compliance reasons and because it is part of a larger, interconnected, and established system

Next Steps If You Are Concerned About Your Property

We know impacts are subjective and want to work closely with the community to understand as much as possible

- If you are concerned about this work impacting your property or views:
 - Call **1-800-400-5722** or email **SausalitoCutoverProject@pge.com** with your name / address
 - PG&E will confirm what work is happening near you and potential impacts
 - Schedule meeting to discuss work happening near your property in more detail
- Please reach out **prior** to work commencing as we will have less flexibility to work with homeowners after work has started
- Limited flexibility where equipment can be placed for safety and compliance reasons and because it is part of a larger, interconnected, and established system
 - Adjustments will be considered based on the most impacted property

Project Outreach

- 90-, 60-, 30-day letters – fact sheet, map of project
- Dedicated hotline, email, and website
 - 1-800-400-5722
 - SausalitoCutoverProject@pge.com
 - www.pge.com/en/about/pge-systems/electric-systems/sausalito.html
- Informational webinars
- Automatic phone call announcing start of construction
- Designated community relations specialist available

Thank You
