**SUBJECT: FOLLOW-UP TO PG&E'S RESPONSE TO SPD-001 QUESTION 21
(SPD-PGE-WMP2026-005)**

Provide responses to the items listed below. This will remain an open data request.

QUESTION 001

In PG&E's response to SPD-001 Question 21, SPD did not prescribe formulas but rather presented the best attempt to present units planned or completed, total costs and average cost per unit for each mitigation. SPD asked PG&E adjustments to each of these three columns according to what they believe would be the most accurate values.

- a. Notwithstanding exceptions discussed by PG&E in regards to GH-01, does PG&E generally agree with the methodology SPD used in SPD-001 Question 21? Explain why or why not?
- b. For many mitigation initiatives, SPD's and PG&E's calculations were exactly the same, such as GH-08. Why did some mitigation initiatives appear to not require an update from PG&E but others required a significant revision?

ANSWER 001

- a. PG&E generally agrees with SPD's methodology when it comes to expense programs as they can be reviewed in specific fiscal years for units and dollars comparison. For Capital programs, unit cost is derived from the total cost of projects that could span multiple years, and the overall completion of units, not just units completed in one fiscal year.
- b. The example of GH-08 did not change for 2023 as most of the figures for 2023 did not change except for VM-03 and VM-04 which seems to be due to an error in the original formula in column G and GH-04 which had the original response number instead of the updated table PG&E submitted on February 14, 2025. The other initiatives requested for 2024 had change due to the SPD numbers being derived from forecasts and PG&E providing actuals. For 2025, the changes are due to old forecasts, whereas PG&E provided values derived from updated 2025 forecasts.
