**SUBJECT: 2026-2028 BASE WMP**

**QUESTION 002**

Section 5.2.2.1 page 63 provides the formula for PSPS likelihood. Please explain why 5 years was selected as the denominator?

**Answer 002**

PG&E's lookback is used to estimate PSPS consequence and includes 2018-2022 data (5 years). This is to align with the initiation and execution of PSPS events in 2018. PG&E's enterprise risk model also includes an additional 2 years of data (2023-2024) that was not included in the existing lookback due to meteorology polygons not being available at the time of the analysis. To address this data gap, PG&E used actual PSPS events but determined the customer impact by de-energizing the upstream device as would be specified using our most recent PSPS guidance and protocols.
