

PACIFIC GAS AND ELECTRIC COMPANY
Wildfire Mitigation Plans Discovery 2023-2025
Data Response

PG&E Data Request No.:	SPD_016-Q010		
PG&E File Name:	WMP-Discovery2023-2025_DR_SPD_016-Q010		
Request Date:	May 30, 2024	Requester DR No.:	SPD_WSPS_PG&E_2024_006
Date Sent:	June 10, 2024	Requesting Party:	Safety Policy Division
PG&E Witness:		Requester:	Henry Sweat

SUBJECT: REQUEST FOR CONFIDENTIAL FILES

QUESTION 010

For each year from 2020 through 2023, and January 1, 2024, through April 30, 2024, and for each work order priority level:

- a. Provide a list and examples of all cause categories used when canceling work orders.
- b. Provide the number of cancelled work orders for each priority work under each cause category.
- c. Provide the number of cancelled work orders for each priority work order under each cause category that was cancelled after the due date.
- d. Provide the number of cancelled work orders for each priority work order under each cause category that was cancelled within ten days before the due date.
- e. Provide the number of cancelled work orders for each priority that were replaced by another work order under each cause category and the priority to which it was assigned.
- f. Provide the number of cancelled work orders for each priority which were cancelled because the work order was no longer considered necessary (for instance, PG&E has referenced the criteria for splices adjacent to insulators may have changed).
 - i. For this case, explain how PG&E is actively attempting to identify these work orders and streamline the process for assessing them. How many does PG&E anticipate remain in the backlog?

ANSWER 010

PG&E is responding to this request with respect to its overhead distribution tags.

PG&E identified approximately 350 emergency tags that were cancelled over the requested time period. PG&E is still analyzing and gathering this information and tentatively plans to respond by Thursday, June 13, 2024.

Please note that PG&E does not use cancellation codes in its System of Record when cancelling emergency tags, which are created and assigned with a Priority A or Priority X category.

- a) There are seven cancellation reason codes can be applied to cancelled Electric Corrective (EC) notifications that have been assigned with a Priority B, E, F, or H category. If a notification is cancelled and is missing a cancellation reason code, the notification review team reviews that notification and applies the correct cancellation code or reopens the notification if it was cancelled incorrectly. PG&E does not include cancellations without a cancellation reason code against WMP tag commitments. A list of the cancellation codes is below:
1. "Dummy" For Order Only: EC is a "dummy" notification created to generate an order ONLY.
 2. All Found Completed/Resolved on Arrival: All work found completed/resolved upon arrival in the field.
 3. Completed Under Another Program: Work belongs to/is being completed under another program (COE, Reliability, WRO, System Hardening etc.);
 4. Converted to Another Notif-Type: EC is being converted to another notification-type; example: EC converted to IF (Idle Facility) notification).
 5. Created in Error (Desk Cancellation): Notification was created in error (desk cancelation); example: EC was created for work that is not required in the GO 165 Program in error, such as to install bolt covers.
 6. Duplicate EC for Same Location: Duplicate EC exists for the same location; the duplicate notification will be referenced in the notification's long text when canceling for this reason.
 7. No Compelling/Regulator Condition Exist: No compelling or regulatory condition exists, i.e. standards change.
- b) Please see the data table below.

Count of notification	Column Labels					
Row Labels	B	E	F	H	Grand Total	
2020			86	2553	82	2721

Grand Total	528	6518	2238	148	9432	

It is difficult to determine how many work orders in the backlog are no longer necessary until the EC tags are validated. To identify and address these work orders, PG&E utilizes the Procedure, “*Open Electric Corrective (EC) Tag Validation Procedure, TD-8123P-200*” which provides a process for validating an open EC tag and assess whether the condition on the tag has worsened. Please see “WMP-Discovery2023-2025_DR_SPD_016-Q010Atch01CONF.pdf” for a copy of this procedure. Open tag validations occur during ground and aerial inspections cycles in both HFTD and Non-HFTD, as well as Field Safety Re-Assessments (FSR) and Comprehensive Pole Inspections (CPI) for the risk prioritized work plan locations which ensure that PG&E is working on necessary EC notifications.
