

Improving Real-Time Weather Awareness

We are enhancing our network of advanced weather stations across our service area. These stations are monitoring for severe weather year-round, helping prevent potential wildfires.

What is a weather station?

Weather stations measure changing weather conditions. This helps us decide if shutting off the power is necessary for public safety.

Where are weather stations located?

- Primarily in high fire-threat areas across our service area
- On exposed mountains and hilltops to track offshore wind events
- On existing assets and non-intrusive, 20-foot standalone poles

Real-time weather data from our stations is available at pge.com/weather.

1,600+
weather stations
installed to date

Our network has one station for every 18 line-miles with 50 new weather stations installed in 2024.
