

Would a power outage impact your ability to use well water?

We may need to turn off power during severe weather. This is called a **Public Safety Power Shutoff (PSPS)**. Our goal is to notify you one to two days ahead of a PSPS. During an outage, well pump users may have access to their water impacted.

Safety tips to help you prepare:

- ✓ **Store a 3-day supply of water** for you and your family – at least 1 gallon of water per day per person.
- ✓ **Fill up a bathtub ahead of a PSPS to ensure** you have access to additional water.
- ✓ **Store a 3-day supply of water** for small and large animals. Consider their size and daily consumption when storing.
- ✓ **Replace water on a regular basis.**
- ✓ **Learn more about our Generator and Battery Rebate Program** to make sure your pump has power during an outage at pge.com/backuppowers.

We are partnered with the California 211 Providers Network to provide support for outages. **To help with water resource planning:**
