

AC Prep – Video Transcript

As temperatures rise, your AC works harder. Here's a few ways you can save and get ready for the summer heat. Start outside and clear away dirt, debris, and plants within two feet of your AC unit to help performance. Add shade or awning so your AC doesn't have to work as hard to cool your home. Check for leaky ducts. Lost air can drive up energy use. And don't forget to replace dirty air filters to improve air flow and efficiency.
