

2023 C&S Code Readiness Subprogram

Overview

In compliance with CPUC D.18-05-041, PG&E is issuing the C&S Code Readiness Subprogram Request for Proposals (RFP or Solicitation). This Solicitation will:

- Consist of a single-stage RFP process,
- Seek proposals from third-party implementers with subject matter expertise in State and National Building and Appliance C&S processes to implement the Code Readiness Subprogram activities to support the C&S Program, and
- Use the Independent Evaluator/Procurement Review Group framework.

The RFP objective is to solicit innovative Proposals from Bidders to increase the likelihood that selected measures, technologies or practices will be adopted into code, readily achieve a high market adoption rate, and ultimately yield the anticipated more efficient energy performance or savings. Proposals must demonstrate Bidders' understanding of the C&S Program's required building and appliance efficiency and decarbonization activities at the federal, state, and local levels. Proposals must articulate a vision of how the Code Readiness Subprogram activities will support and accelerate the advancement of measures and technologies to enhance code and widespread market adoption.

Targeted Schedule

RFP Event Schedule	Date
