## Benefits of LED lamps for your business

LED lamps provide significant energy and bill savings with equal or better light quality. LED lamps use 75-85% less energy than incandescent lamps, last up to 10x longer, have an average payback period of 8-15 months with incentives and most are compatible with existing fixtures. [See PG&E's new LED rebates.](#)

## Save energy with your monitor

Computer monitors draw power for hours each day and typically account for a third of a desktop computer's energy use. If everyone in the United States used their monitor's sleep mode, it would produce savings of more than a billion dollars a year in energy costs and 15 billion pounds of greenhouse gases. Take these [steps to reduce your monitor's energy use.](#)
