The Manufactured and Mobile Homes Program is a full-service energy efficiency program that helps owners and residents of manufactured and mobile homes save money and energy off their energy bills. Eligible participants may receive energy saving products and services at no cost that help increase the efficiency of their electric, gas, and water appliances and fixtures. Increasing efficiency also benefits the environment by conserving our natural resources and reducing air emissions.

Administered by Synergy EE, a third party energy efficiency implementer specialist and a certified ENERGY STAR® contractor, the program serves Pacific Gas and Electric Company (PG&E) customers at no cost.

Eligibility Requirements

Pacific Gas and Electric Company customers who occupy manufactured and mobile homes are eligible to participate. Tenants may participate with the property owner’s written permission.

Energy Efficiency Measures Covered

The program covers many energy efficiency measures, including:

• Brushless fan motor replacement
• Refrigerant charge adjustment and tune-up
• ENERGY STAR-rated products, including lighting, low-flow showerheads, and aerators
• Vending machine controllers for common areas

Brushless Fan Motor Replacement

Central heating and cooling systems typically have a fan motor that blows air through the air ducts and into your home. Most fan motors are very inefficient and are part of the reason that air conditioners use so much electricity. Brushless fan motors are highly efficient and provide the same amount of air flow while consuming much less electricity.
Refrigerant Charge Adjustment

For air conditioners to run efficiently, they should be serviced regularly and have the refrigerant charged at the optimal level. Our certified technicians will perform a diagnostic assessment and tune-up on your air conditioner and make adjustments to your refrigerant level as needed.

ENERGY STAR-Rated Products

Retrofits with energy efficient products are available to save energy and water, including lighting, low-flow showerheads and faucet aerators.

Vending Machine Controllers

A typical vending machine is on even when no one is around. Vending machine controllers are a type of occupancy sensor that senses when people are nearby. When no one has been around the vending machine for a time, the controller powers it down. Periodically the machine will power on to keep product cold, but will otherwise remain off until people return, thus saving energy.

Participation is Easy

The Manufactured and Mobile Homes Program makes it easy for eligible customers to take advantage of its benefits:

1. The customer signs an access and program participation agreement.
2. A Synergy associate performs a walk-through of your home to identify eligible measures.
3. Installation and service is scheduled and takes place at a convenient time for the customer.
4. The customer may be selected to participate in a telephone survey or for an on-site inspection by a representative of PG&E or Synergy EE.

Next Steps

Visit www.synergycompanies.org/financing/utility/pge-mobile-home-program for details. To get started, call Synergy EE at 1-800-439-9610, extension 165, or contact the program coordinator at pge.mobile@synergycompanies.org. You can reach the PG&E Smarter Energy Line at 1-800-933-9555 or visit www.pge.com for information about energy efficiency programs.
