

BEAT THE PEAK

PEAK DAY PRICING EVENT DAY QUICK TIPS FOR OFFICES

Conserve Energy. Save Money.
Follow these simple tips to cut your energy costs on Event Days from 2:00pm-6:00pm.

UPGRADE LIGHTS

Install reduced-wattage linear fluorescent lamps to save on your energy costs while maintaining the same level of ambient lighting you are used to.

UP THE THERMOSTAT

Adjust your thermostat up a couple of degrees on Event Day afternoons. Many indoor spaces can comfortably be kept at 78° F for a few hours at a time.

CLEAN A/C

Improve efficiency of your A/C unit by performing regular cleaning and maintenance. Even newer units benefit from a cleaning.

TURN IT OFF

Turn off equipment when not in use, such as copiers, printers and computer monitors. Even when idle, electronic equipment draws power.

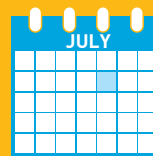

TURN OFF HALLWAY LIGHTS

Many corridors are lit by both overhead ceiling lamps and wall sconces. On Event Days, see whether the sconces (alone or in conjunction with daylight) can provide adequate lighting.

SHADE WINDOWS

Close the blinds and shade windows to block direct sunlight during peak hours and give your A/C a break.
