

# FREE! From PG&E

**A New Energenius® Program –  
For grades 5–6**

## Power Down for the Environment

This Energenius program helps students learn where energy comes from and how it is used in their school and homes. They focus on energy-efficient habits that can save energy and reduce the impact of energy use on the environment. Students will complete surveys and energy check-up activities to learn how smart energy habits can conserve natural resources. This program can be used as a stand alone material or as part of a larger unit on energy and the environment.

### Curriculum – 3 lessons

The teacher guide provides detailed lesson plans, background information, a glossary, and ideas for extension activities. Lessons correlated to Common Core State Standards (CCSS) and Next Generation Science Standards (NGSS).

**One per teacher.**

### Power Down for the Environment Student Activity Book

This 32-page student book includes readings, diagrams, surveys, and a myriad of web-based research activities. Activities focus students on the technologies that they use and the energy it takes to “power” their devices. They read informational text about the costs of energy and track their use at school and at home. Students evaluate why it is important to be energy efficient and how powering down can save energy and money. The activity book includes a detailed glossary. **One per student.**
