

New Gas Service

Project Checklist

After applying for new, upgrades or changes to existing gas service you will be assigned a Pacific Gas and Electric Company (PG&E) representative.

To further assist in the next phase of your project we suggest you or your contractor gather as much information as possible to prepare for your site assessment with PG&E. If you are having difficulty obtaining certain information, your representative can also help to make sure your project meets technical requirements.

1 Are your home building or renovation plans approved by your city or county building and planning department and have all permits been issued before construction begins? Yes No

2 Are there PG&E gas pipes currently in your neighborhood? Yes No

3 Does your adjacent neighbor have a gas meter? Yes No

4 What is the gas load required? This is determined by the types of gas appliances you have or plan to install. Have a list ready to review with your representative:

APPLIANCE TYPE	MBTU/H	QUANTITIES

5 The total square footage of your home _____

6 What is the approximate distance from the proposed meter location to the middle of the street? _____

- 7 If you are planning to relocate your gas meter, indicate new location

TIP To find preferred gas meter locations refer to the PG&E's GREENBOOK in the [Gas Service](#) section at www.pge.com/greenbook. If you are also requesting an electric service, make sure you have adequate separation between the gas and electric meters.

- 8 Have you or your contractor checked the path from your proposed meter location to the street and made sure it's clear of water and sewer pipes, trees, or other obstructions? Yes No

TIP To find out more details visit Underground Service Alert (USA) at www.usanorth.org or www.call811.com.

- 9 Will you or a contractor be trenching and backfilling? _____

TIP If you elect to trench and backfill on your own, you will be responsible for obtaining any permits required by your city or county building and planning department. You will also be subject to rigorous PG&E safety inspections. Refer to the Getting Started Guide: Trenching at www.pge.com/GettingStarted for detailed information.

- 10 In order to provide your home with gas service will PG&E's service pipe be required to cross a property, other than your own? Yes No

TIP You may need to obtain a "right of way" document.

For more information on how PG&E can help with building and renovation projects for your home, visit www.pge.com/building or call 1 877 743 7782.
