

Pit 5 Reach Whitewater Flows

September 6-7 and September 20-21

Flows will be 1,200 to 1,500 cfs or more

This river reach contains class III, IV, and V rapids appropriate only for skilled whitewater paddlers. Reach is not appropriate for tubing at these flows.

As required by the Pit 3, 4, 5 Project Hydroelectric license, PG&E will be releasing high, whitewater flows from the **Pit 5 Dam to the J.B. Black Powerhouse.**

Cold, Swift Water

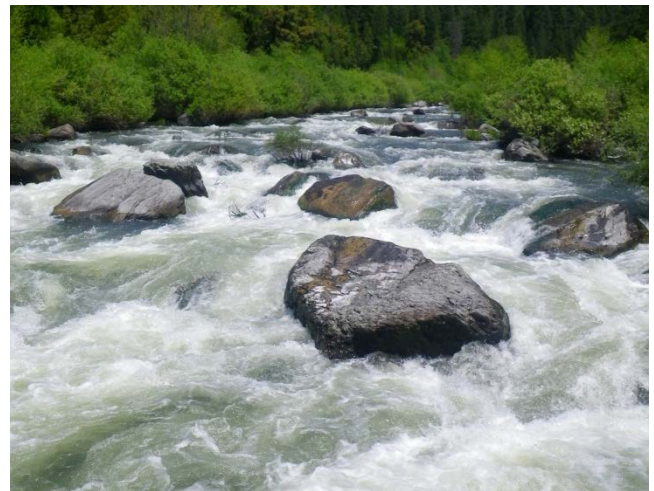

Sudden immersion in ice-cold water can stimulate the “gasp reflex” causing an involuntary inhalation of air or water.

Wear a Life Vest and Know Your Limits

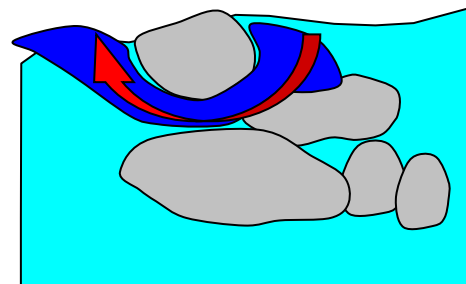

Swift flows can create treacherous currents and drowning risks for anglers, waders, swimmers, and boaters.

Recreationists are cautioned to consider water conditions before entering the river during this flow event.

For emergencies call 911.
