## Definitions:

A **manually operated thermostat** allows user to adjust temperature setting up or down as desired by manually turning a dial or moving a lever

**Please note:** manually operated thermostats contain mercury which need to be disposed of carefully and properly. To find a safe and free collection site near you, visit [recyclehomethermostats.org/california](http://recyclehomethermostats.org/california).

A **programmable thermostat** uses a built-in calendar and clock for temperature adjustment by day and time.

A **smart thermostat**, in addition to doing everything a programmable thermostat does, is Wi-Fi enabled and automatically adjusts heating and cooling temperature settings in your home for optimal performance.

**Uniform Energy Factor (UEF) and Energy Factor (EF)** are measures of a water heater's efficiency. UEF and EF are based on recovery efficiency, standby losses and cycling losses. A higher UEF or EF indicates a more efficient water heater.
