

Pacific Gas and Electric Company Potrero Site Cleanup Project Weekly Activity Report 7/21/17

This report provides an update on the status of cleanup work in the Northeast Area of the former power plant located at 1201 Illinois Street. Cleanup work is being performed as part of a company-wide program to address sites that have been impacted by historic operations. Project oversight is provided by the San Francisco Bay Region Water Quality Control Board and the city/county of San Francisco.

Work Completed 7/17/17 to 7/21/17

- Began to install the construction fence and storm water controls around the work area on the property
- Prepared the area that will be used to stockpile soil
- An in-water barrier, called a turbidity curtain, was installed (see photo below); to contain soil or other materials that may come from the onshore worksite; this is a required best practice for work along the shoreline
- Set-up water quality monitoring stations on four floating platforms to check the effectiveness of the turbidity curtain
- Continued to install the Construction Water Management System, including storage tanks (see photo below)
- Continued to install the storm water management system that will keep rainwater runoff out of the work area
- Received equipment deliveries, including a fork lift

Work Planned for Upcoming Week

- Continue to receive equipment deliveries, including an excavator and loader
- Installation of the truck cleaning area, including scaffolding to be used in support of truck loading operations
- Continue to install the Construction Water Management System (see photo below)
- Continue to install the storm water management system

Air Monitoring

- Air monitoring will begin prior to soil excavation work starting next week

Work Hours

- 7 A.M. to 8 P.M., Monday through Friday

Anticipated Impacts

- Minimal impacts are expected while the site is prepared for future construction

Site Security

- On-site security is present at the site and access gates are closed to the public at all times
