

## **PG&E's 2021 DIDF RFO**

### Questions and Answers (Blackwell Utility Ownership Webinar)

#### **Question 1**

Will PG&E move forward with a project if the cost exceeded the deferral value?

#### **Answer 1**

PG&E does not expect to execute a contract with a project that is above the cost cap.

#### **Question 2**

Will credit be given to a project that has a life of more than seven years, or is PG&E just looking for a system with an expected life of seven years?

#### **Answer 2**

PG&E is seeking a solution that can meet the seven-year deferral term, and the project specs require a minimum life of seven years. PG&E is not attributing any additional value to longer project life in the selection process.

#### **Question 3**

How much reserve capacity does PG&E want in the system? Will PG&E procure more than the minimum MW required?

#### **Answer 3**

PG&E is seeking a project that can meet the minimum MW and MWh requirements for the deferral need at Blackwell. Parties must submit an offer that meets those specific MW and MWh requirements. PG&E will also consider larger offers, and PG&E could accept an offer for a project that exceeds the capacity for the deferral need that we are seeking at Blackwell if it is below the cost cap.
