

2019 Tree Mortality Non-Bypassable Charge (TMNBC) Bundled Renewable Portfolio Standard (RPS)  
Energy Sale Solicitation

**Q&A**

1. Can I bid for only 10% of the output of one facility? No, PG&E is not accepting bids for partial volumes of facility output. Buyer must accept the full output of the applicable facility's generation.
2. What is the historic annual output of each site? PG&E will make available the historical generation data for its existing Tree Mortality Power Purchase Agreements (TM PPAs) with 1) Burney Forest Products and 2) Wheelabrator Shasta via Power Advocate (Downloads tab) upon receiving an executed Attachment C – Confidentiality Agreement. Participants should submit executed Attachment C – Confidentiality Agreement via Power Advocate.
3. What are the contractual guarantees of output? There will be no contractual guarantee of output in PG&E's contract with the Buyer. Buyer will receive the full energy and renewable energy credit (REC) output from the applicable Tree Mortality Power Purchase Agreement (TM PPA). However, there are performance requirements in place within the existing TM PPAs which can be accessed in Power Advocate upon submitting an executed Attachment C – Confidentiality Agreement.
4. Is this opportunity considered an IST transaction? We are asking because we have noticed that the TMNBC Bid Form asks for a Price (REC-Fixed Price in \$/MWh). Would this imply that the energy value is netted to zero? This structure does not include ISTs. PG&E, or a third-party designated by PG&E, would be the scheduling coordinator of the Project. Buyer would not have any scheduling obligations under the confirmation.
