

Enhanced Powerline Safety Settings (EPSS) Progress Report

SONOMA COUNTY

The following is an update on the actions we are taking in Sonoma County to improve the reliability of your power during wildfire season. Earlier this year, we adjusted safety settings on electric equipment in your community to help prevent wildfires. While these adjustments made the electric system safer, they also resulted in more frequent outages. That is why we took immediate action to improve, without compromising safety.

Improvements in Sonoma County

Made to Date

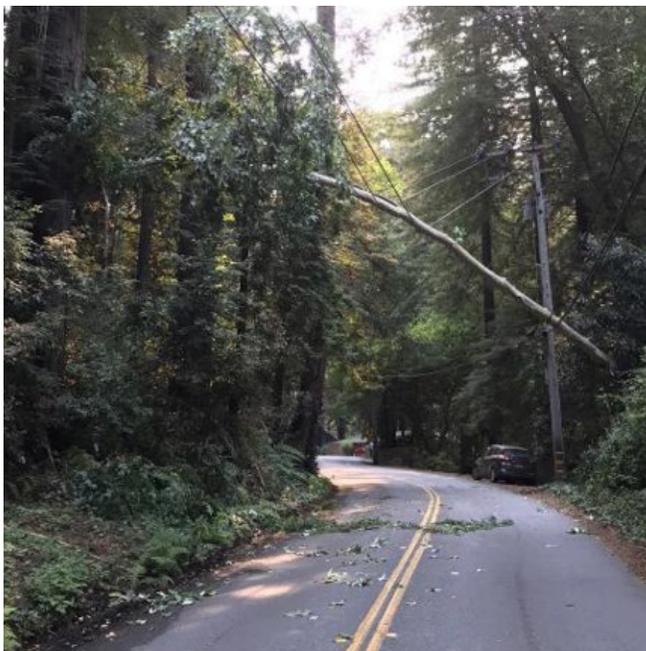

- **Fine-tuned sensitivity** on **61** devices to reduce the likelihood of an outage
- **Improved device coordination** to make outages smaller
- **Improved circuit patrol coordination** to restore power faster

Currently Underway

- **Installing additional animal protection devices** on our equipment
- **Targeted vegetation clearing** to prevent branch and tree fall-ins
- **Targeted equipment inspections and hardening**

Hazards Identified in Sonoma County

There were no instances of damage/hazards found in Sonoma County last month.

Example of a vegetation hazard that resulted in an EPSS outage last month

Sonoma Circuit Level Improvements

We have optimized all circuits in Sonoma County. This will reduce the frequency, size and duration of outages, while maintaining wildfire protection.

As a result of optimization:

Average Decrease in Outage Duration

CIRCUIT: Geyserville 1102

■ Before optimization ■ After optimization

Sonoma County Weather Outlook

The recent rainfall has increased the moisture content in vegetation and decreased the risk of wildfire. As a result, we have restored circuits back to their normal, pre-EPSS settings. This will result in fewer power outages. We will continue to monitor wildfire risk, weather and fuel conditions to determine if EPSS settings need to be turned back on in Sonoma County.

There have been no recent EPSS outages in Sonoma County between 10/20 and 11/10.
