

Wildfire Safety Inspections Program

Inspections and Repairs Update by County

As part of our enhanced wildfire safety efforts, we are conducting accelerated safety inspections of electric infrastructure in areas of higher wildfire risk and addressing immediate safety risks as they are identified. We are implementing these inspections following the 2017 and 2018 wildfires as additional precautionary measures intended to further reduce wildfire risks. This effort is about keeping our customers and communities safe given the growing wildfire threat across the state.

Inspections Progress

DISTRIBUTION

99.99% COMPLETE
of ~700,000 structures
over 25,200+ miles

TRANSMISSION

98.75% COMPLETE
of visual inspections
~50,000 structures
over 5,500+ miles

SUBSTATIONS

100% COMPLETE
of 222 substations

Repairs Progress

Throughout the inspection process, we have been addressing and repairing conditions that pose an immediate safety risk, while completing other high-priority repairs on an accelerated basis. Repairs for other conditions will be completed as part of our routine work execution plan. We want our customers to be completely informed about the work that we are doing in their community. Our repairs are prioritized based on the potential safety impact of the identified condition, with "A" tags being the highest priority.

We use the following categories for the high-priority conditions:

- "A" conditions are those that require immediate action. All "A" tags have been repaired, made safe or are being actively worked on.
- "B" conditions are those that generally need to be addressed within 3 months from the date a condition is identified.

Please note tags are considered open until all records have been fully processed and closed out; as a result, the percentage of tags repaired or made safe in the field may be higher than reflected.

See pages 2-5 for an update on inspections and high-priority repairs by county 

Community-specific Progress

The table below summarizes the progress we are making on our accelerated and enhanced inspections and high-priority repairs, organized by county. The county numbers below include numbers from both cities and unincorporated areas.

COUNTY	TYPE	DISTRIBUTION			TRANSMISSION			SUBSTATION			% REPAIRED*
