Working together to keep trees away from powerlines and protect you and your community.

Please look inside for more information on upcoming safety work.
Together, we can reduce the risk of wildfires and power outages and keep you and your community safe.

What We’re Doing

We know how important trees are to you, your community and the environment. Trees are important to us too, and they are changing every day.

That is why PG&E is carefully and frequently reviewing all trees and shrubs near electric lines to ensure we are addressing those that pose a safety concern.

This work takes place across approximately 100,000 miles of overhead powerlines every year, with some locations inspected multiple times a year.
You may see PG&E and contractor trucks and crews in your neighborhood **multiple times each year** to keep trees and brush away from electric lines and equipment.

### What This Work Involves

- Pruning trees to meet or exceed important **state vegetation and fire safety standards**
- Cutting down **dead, diseased, dying or defective trees**
- Evaluating the condition of trees that may need to be addressed if they are tall enough to strike powerlines or equipment
- Pruning or cutting down trees and shrubs to **increase defensible space or to construct stronger, more resilient electric equipment**
- Additional safety work to **address vegetation near electric equipment and gas lines**
PG&E is committed to partnering with our customers and communities to share why this safety work is so important.

If any safety work is planned for your property, you can expect phone calls, postcards and door hangers prior to work taking place.

What You Can Expect

PG&E or contract inspectors will inspect trees or shrubs to identify any safety concerns.

Crews will be on your property following the inspection to complete any necessary work.

Crews will perform follow-up inspections and ensure work meets required safety standards.

For questions about this work, call us at 1-877-295-4949 or email wildfiresafety@pge.com
There are easy ways you can help keep you and your community safe

Ensure crews have safe access to PG&E equipment

By ensuring PG&E and contractor crews can safely access your property to inspect and manage trees and shrubs, you are helping to keep you and your community safe.

Plant the right tree in the right place

Planting an appropriate species of tree or shrub a safe distance from powerlines can help promote fire safety, reduce power outages and ensure beauty for years to come. Visit pge.com/righttreerightplace for more information.

Maintain defensible space on your property

Similar to creating a safe space around powerlines, maintaining defensible space on your property can help protect your home and family from wildfires. Visit safetyactioncenter.pge.com for more information or reach out to your local fire department.
