To ensure the safety of our customers and communities, PG&E is taking steps every day to keep trees away from powerlines, improve the safety and reliability of our electric system and reduce the risk of wildfires. This includes working with our customers year-round to manage trees and shrubs located near powerlines that could cause a wildfire or power outage.

We carefully and frequently inspect all trees and shrubs located near electric equipment to ensure we are addressing those that pose a safety concern. This annual work takes place across approximately 81,000 miles of electric distribution lines and equipment every year, with some locations inspected multiple times a year.

What Customers Can Expect

- PG&E will inspect trees and shrubs on your property throughout the year to identify any safety risks.
- If any safety work is planned for your property, you can expect to be notified by phone calls, postcards and door hangers.
- After work is finished, crews will conduct follow-up quality inspections to ensure required safety standards are met.
