Pipe Insulation

Stop throwing money away with long runs of uninsulated pipes. A significant amount of heat energy is lost through hot water and steam pipes that are not insulated.

Because your business uses these pipes for so many hours every day, insulating them would produce significant energy savings and, therefore, lower energy costs. Even better, PG&E offers a rebate to help you purchase the insulation.

Many standard businesses have about **200 feet** of uninsulated hot water or steam pipe.

Insulation can save as much as **\$2,038** in avoided energy costs on an annual basis.
