

Summer time-of-use rates are here.

Start saving today with these energy-saving tips.

With summer time-of-use rates, which are in effect from May through October, there is a peak period from noon to 6:00 p.m., Monday through Friday, when rates are higher. Because many businesses use more energy during the summer, PG&E is providing these simple energy-saving tips across a range of categories to help get your business on the road to saving money.

Log in to pge.com/myenergytips to understand your business's energy use and see how these and other tips can help reduce your electric bill this summer.

78

Thermostat Setting

★★ Medium Savings

Set thermostats to 78°F for summer cooling. Or try to pre-cool in advance, and turn air conditioning down or off during peak hours to save.
