

Business Customers: Your rate plan options

Pacific Gas and Electric Company (PG&E) provides a range of electric and natural gas rate plans. Are you on the best plan for your business? To better understand the different rates, log in or register at [pge.com](https://www.pge.com) to compare your current rate plan with other options. Online you can:

- Get detailed information about your current usage
- Maximize savings with a free energy assessment through the Commercial Energy Checkup
- See your current rate plan listed on your monthly energy statement under “Details of Electric Charges”

In addition to the online services we provide, you may call us at **1-800-468-4743** for assistance with a rate analysis.

Together, Building
a Better California

Time-of-Use Rate Plans

Time-of-Use[†] (TOU) rate plans can help you save money based on when your business uses energy. They offer lower rates when energy demand is low. Conversely, rates increase when energy demand is high. Electric charges vary based on the time of day and the season.

Small General Time-of-Use Service (A-1)

is for businesses whose peak monthly demand consistently remains less than 75 kilowatt (kW) or with usage of 150,000 kilowatt hour (kWh) or less per year.

Small General Time-of-Use Service (A-6)

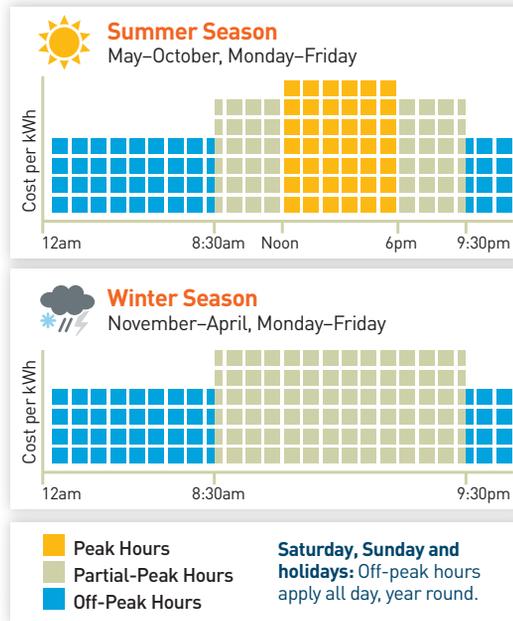

is for businesses whose peak monthly demand consistently remains less than 75 kW or with usage of 150,000 kWh or less per year. Effective April 1, 2017, these new A-6 rules apply to new A-6 applicants, but all pre-existing A-6 customers can remain on A-6 if their demand does not exceed 499 kW for more than three consecutive months during a 12 month period. Review the new A-6 rules at pge.com/tariffs. This rate includes:

- Higher prices on summer weekday afternoons compared to A-1 rates
- Slightly lower winter and off-peak kWh charges than A-1 rates

Medium General Time-of-Use Service (A-10)

is for businesses whose peak monthly demand consistently remains under 500 kW each month. This rate includes:

- A Demand Charge based on the maximum load, expressed in kW
- Higher customer meter charge than A-1 TOU
- Lower kWh TOU energy charges than A-1 TOU

[†]Daylight saving time will end November 6, 2016, and begin March 12, 2017. To adjust for this, from October 30 to November 5, 2016, and March 12 to April 1, 2017, your time-of-use periods will begin and end one hour later.

Medium General Demand-Metered Service (E-19V)

is an optional plan for businesses whose peak monthly demand is less than 500 kW.

This rate includes:

- A Demand Charge based on the maximum load, expressed in kW
- Higher customer meter charge than A-1 TOU
- Time-of-use demand charges
- Lower kWh TOU energy charges than A-1 TOU or A-10 TOU

E-19, E-19V and E-20 may voluntarily select **(Option R)** if your business has or will be installing solar generators whose output is 15 percent of either your last 12 months of pre-solar annual electric usage (for new solar) or your annual electric usage plus annual solar generator's output (for existing solar).

- Includes an increase of the on-peak and part-peak TOU energy charges
- Offers lower on-peak and part-peak TOU demand charges

Customers over 499 kW will automatically transition to E-19 TOU and those over 999 kW will automatically transition to E-20 TOU rates.

Add-on Rate Plans

Net Energy Metering offers pricing plans for eligible businesses who operate a qualified generating facility, such as solar, wind or fuel cell, with a maximum total capacity of 1,000 kW or less and is connected to the PG&E grid. To learn more about Net Energy Metering services, visit pge.com/businesssolarincentives.

California Alternate Rates for Energy (CARE) Program provides business customers a monthly discount on energy bills for qualified group living facilities. To learn more about the CARE Program, visit pge.com/CARE.

Peak Day Pricing combines a time-of-use (TOU) rate with Peak Day Pricing Event Day surcharges.

- There are 9 to 15 Peak Day Pricing "Event Days" per year.
- An Event Day surcharge is added to the regular TOU rate during peak hours from 2–6 p.m.
- Rates are discounted at all other times from May 1 to October 31
- Bill protection is provided the first year so you can try the program risk-free

To learn more about Peak Day Pricing, visit pge.com/pdp.

Small Renewable Generators (E-SRG) and Public Water and Wastewater Facilities (E-PWF) electric rates are available to renewable generators up to 1.5 megawatts. To learn more, visit pge.com/businesssolarincentives.

Note: Direct Access (DA) and Community Choice Aggregation (CCA) customers purchase electricity from another provider and receive electric transmission and distribution services from PG&E. Net Metering, DA and CCA customers are eligible for many, but not all, of the rate plans or features listed in this notice. For more information contact your Electric Service Provider or CCA.

Natural Gas Services

Are you aware of your natural gas options? At PG&E your rate plan is determined by the level of service you need and the amount of gas used per month.

Small Commercial (G-NR1) is a rate plan for businesses that use less than 20,800 therms per month. You choose who supplies your natural gas, PG&E or a third-party gas supplier.

Large Commercial (G-NR2) is a rate plan for businesses that use more than 20,800 therms per month during the last 12 months for those months which exceed 200 therms. You choose who supplies your natural gas, PG&E or a third-party gas supplier.

If you choose a third-party gas supplier, PG&E will continue to transport and deliver gas to your business with the same high level of safety, reliability and service that we provide to all of our customers regardless of which gas supplier you choose.

Gas Transportation Service to Noncore End-Use Customers (G-NT) is for businesses whose average monthly use is greater than 20,800 therms through a single meter who elect noncore service. This usage is measured over the previous 12 months, excluding those months in which usage was 200 therms or less.

- Must secure their gas supplies from a third party and not from PG&E
- Your service may be curtailed or interrupted due to supply or system constraints
- Includes a reduced rate for the transportation of natural gas

Other natural gas rate plans

Natural Gas Service for Compression on Customer's Premises (G-NGV1) applies to the sale of uncompressed natural gas for the sole purpose of compressing it for use as a motor-vehicle fuel.

Gas Transportation Service to Noncore Natural Gas Vehicles (G-NGV4) is for customers that have elected noncore service and have a natural gas fueling station whose average monthly use is greater than 20,800 therms through a single meter.
