

Natural Gas Customers:

Important gas safety information regarding your pipelines

PG&E is responsible for maintaining the system that delivers natural gas, up to and including the gas meter.

Customers are responsible for the maintenance of customer-owned piping on their property.

Customer (or customer-owned) gas lines refer to all above ground and buried pipelines running from the customer's gas meter to their house or business, including pipelines leading into a building or home to any gas-fired equipment or appliance.

Typically, PG&E does not maintain or inspect customer-owned gas lines, so we've included some safety and maintenance information for you on the reverse side of this flyer. **To speak with one of our gas safety specialists, please call PG&E at 1-888-743-7431 or visit us at [pge.com/safety](https://www.pge.com/safety).**

Together, Building
a Better California

Maintain and inspect

We recommend that you periodically have your gas lines inspected for leaks and corrosion. A licensed plumber or contractor can help you locate, inspect and repair pipelines on your property.

Pipelines should be repaired immediately if corrosion or any other unsafe condition is discovered. Ask a PG&E representative or another qualified professional to perform a safety check to restore gas service and relight your appliance pilots.

Prevent damage—dig and plant safely!

Damage from digging is a common cause of pipeline accidents. Whether you are putting up a fence or planting a garden, **call 811 or visit california811.org at least two working days before starting any digging project.** Contractors are required by law to contact **811**.

This **FREE** service notifies PG&E and other utilities to locate and mark the approximate location of their underground lines.

Digging still poses a risk to customer-owned gas lines since these lines cannot be located by contacting **811**. A licensed contractor or plumber can help you locate these lines. Remember to keep a record for future work.

Learn about Excess Flow Valves (EFV)

An EFV is a safety device that automatically closes and significantly restricts unplanned or excessive natural gas flows in the event the pipeline is severed by digging. Please visit pge.com/excessflowvalve to learn more.
