

# Dig and plant safely this spring

See inside

PG&E's most important responsibility is the safety of our customers and the communities we serve. Whether you are planting a tree, working in your garden or installing a fence, you may be working around underground electric lines and gas pipelines. **Learn important safety tips** about keeping your family, your neighbors and the community safe.

# Plan a safe project

**Call 811 or visit [california811.org](http://california811.org)** at least two working days before you dig and plant. California law requires contractors and construction professionals to use this FREE one-call service.

**Mark your project area in white.**

Leave all colored flags, stakes or paint that mark underground lines in place until you finish digging. These markers, placed by utility companies, are **valid for 28 days.**

Use hand tools when working **within 24 inches** of the outside edge of any underground lines.

## Know what's below

**811** is a **FREE**, one-call service that notifies local utility companies to locate and mark their underground facilities so you can dig safely. Calling **811** or visiting [california811.org](http://california811.org) can prevent potential hazards like digging into underground electric lines and natural gas pipelines.

### Understand utility markings

Look for these markings to know what utilities are underground.

PROPOSED EXCAVATION	TEMPORARY SURVEY MARKING
ELECTRIC, POWER LINES	GAS, OIL, STEAM, CHEMICAL
CABLE, COMMUNICATION	SEWER, STORM DRAIN
RECLAIMED WATER	POTABLE WATER

## Spot a natural gas leak

Natural gas pipeline leaks can occur due to careless or unsafe excavation and may lead to evacuations, natural gas service outages, fire, property damage or serious injury.

**Smell:** Smelling a "rotten egg" odor may be an indication of a gas leak due to the odorant we add for your safety\*.

**Sound:** Listen for hissing, whistling or roaring sounds coming from underground or gas appliances.

**Sight:** Look for dirt spraying into the air, bubbling in a pond or creek and dead/dying vegetation in an otherwise moist area.

### Respond to a gas leak

If you damage an underground facility or suspect a gas leak:

1. Leave the area immediately and move to an upwind location. Alert others of possible danger.
2. Call **911** to notify emergency personnel and call PG&E at **1-800-743-5000**.

\*Some people may not be able to smell the odor due to a diminished sense of smell, olfactory fatigue (normal, temporary inability to distinguish an odor after prolonged exposure), or because it is masked or hidden by other odors that are present. Also, certain conditions in the pipe and soil can cause odor fade—the loss of odorant so that it is not detectable by smell.

## Safety is our highest priority

We monitor our gas pipeline system 24 hours a day, 7 days a week. We also conduct regular ground inspections, aerial patrols and surveys to check for possible leaks and other damage. Visit [pge.com/gassafety](https://www.pge.com/gassafety) for more information about our gas pipelines.

## Learn more about our natural gas pipelines

Underground pipelines are the safest way to transport natural gas. Our larger **transmission pipelines** carry gas from one part of the state to another.

### TRANSMISSION

Carries gas  
across the state

Steel pipeline size:  
2 to 42 inches

**Higher pressure:** Greater than 60 pounds per square inch

Our **distribution lines** are smaller and deliver natural gas to homes and businesses for heating and cooking.

### DISTRIBUTION

Delivers gas  
to your home

Plastic or steel pipeline size:  
0.25 to 24 inches

**Lower pressure:** Less than 60 pounds per square inch
