

AC Summer Prep

Spring is the perfect time to prepare your air conditioner for the summer months.

Here are some things that you can do right now.

Schedule your annual safety and maintenance check, and make sure it's done by a licensed technician.

A poorly maintained AC unit consumes 10% to 30% more energy than necessary.

Clear away weeds and debris to ensure the air can circulate freely around the unit.

Shading the unit can help if airflow is not hindered.

Examine the duct work for any cracks or broken connections.

And always remember to check those filters monthly.
