

Energy Efficiency Do It Yourself Toolkit

During these months when energy demand on the grid can peak, PG&E wants to help customers save energy, money, and support the grid. For just under \$200, the items inside this do-it-yourself toolkit can help a typical PGE customer save nearly \$1,000 or more on their annual energy bills. But keep in mind those savings can vary by home and energy use. Here's just a few of the things that can help make a big difference. First, a smart thermostat. You can find one online for \$80. According to EnergyStar, Smart Thermostats can help you save about 8% on your annual electric bill. Next, LED bulbs. You can find these for about \$250 each. And lastly, a power strip. Devices can draw power even when they're turned off. If you'd like to learn more ways to improve energy efficiency, head to pge.com.
